Abstract

This table contains the EoS of H. Shen, F. Yang, H. Toki, K. Oyamatsu, and K. Sumiyoshi [1,2] using a non-linear relativistic mean-field model with the TM1 parametrization [3] of the effective interaction. Non-uniform nuclear matter is calculated in the single-nucleus Thomas-Fermi approximation with parametrized density distributions in spherical Wigner-Seitz cells. Only neutrons, protons, α particles and a single heavy nucleus are considered. The present table was taken from the website <http://user.numazu-ct.ac.jp/~sumi/eos/> of K. Sumiyoshi. The contribution of electrons/positrons and photons has been added to the original table.

eos.thermo

eos.thermo and the three grid defining files are CompOSE standard data files and by definition available. eos.thermo does not necessarily provide all possible data.
