Abstract

This inner crust EoS, including nonspherical pasta phases, was calculated within a self-consistent Thomas-Fermi approach [1] for β -equilibrium matter at zero temperature. The EoS parameterisation used was the density-dependent RMF TW model [2]. Matched to model BSK22 [3] for the description of the outer crust below $n_B = 2 \times 10^{-3} \text{ fm}^{-3}$.

eos.thermo

eos.thermo and the three grid defining files are CompOSE standard data files and by definition available. In eos.thermo, an extra quantity is added (last column). It refers to the geometry of the correspondent pasta phase, represented by an integer, with 0 for the outer crust, and 1 - droplets, 2 - rods, 3 - slabs, 4- tubes, 5- bubbles, and 6 corresponds to the core (homogeneous matter).

Range and density (#) of the grid parameters:

	Quantity	Unit	min	max	#

Further Available Data Files

Files and quantities listed in the following are provided beyond CompOSE's core requirements as outlined in Sec.4.2. of the CompOSE manual.

eos.mr : This file provides the gravitational mass (in solar masses), the radius (in km), and the tidal deformability of a family of stars computed for this unified inner-crust-core RMF EoS model, with the BsK22 outer crust.

eos.compo : available
4 particle pairs (neutrons, protons, electrons, muons) and one quadruple for heavy nucleus.
