#### Abstract

This is the SFHoY EOS table [1] which is based on the statistical model with excluded volume and interactions of Hempel and Schaffner-Bielich (HS) [2] with RMF interactions SFHo [3] ${ }^{1}$, where the entire baryon octet has been considered. For the masses of nuclei, FRDM [4] was used. Contributions of electrons, positrons and photons are included.

$\mathrm{T}, \mathrm{n}_{b}$, and $\mathrm{Y}_{q}$ are stored in eos.t, eos.nb, and eos.yq, respectively.

## Further Available Data Files

Files and quantities listed in the following are provided beyond CompOSE's core requirements as outlined in Sec.4.2. of the CompOSE manual.
eos.compo : available

[^0]:    ${ }^{1}$ Updated parameter values have been used for the calculation of the tables communicated by M. Hempel, see table below, to ensure a smooth transition from the purely nucleonic part to the hyperonic part.

[^1]:    ${ }^{2} 0$-values indicate, that the corresponding data is not provided.
