### Abstract

This table represents the zero temperature and  $\beta$ -equilibrium EoS by Akmal , Pandharipande and Ravenhall using variational techniques [1], interaction  $A1\ 8 + \delta v + UIX^*$ . The transition to the pion condensed phase at high densities is modelled via an inhomogeneous mixed phase with a Gibbs construction, see chapter 5.12 of [2]. The inner crust is calculated with SLy4 [3], the outer crust from Baym, Pethick, Sutherland [4]. No compositional information is available.
