Abstract

This table contains the EoS of H. Shen, F. Ji, J. Hu and K. Sumiyoshi [1,2] using a non-linear relativistic mean-field model with the TM1 parametrization [3,4] of the effective interaction. Compared with the original version [5,6], a density dependent symmetry energy has been introduced [4]. Non-uniform nuclear matter is calculated in the single-nucleus Thomas-Fermi approximation with parametrized density distributions in spherical Wigner-Seitz cells. Only neutrons, protons, α particles and a single heavy nucleus are considered. The present table was taken from the website http://user.numazu-ct.ac.jp/~sumi/eos/ of K. Sumiyoshi. The contribution of electrons and photons has been added to the original table.
